

INNOVATIVE

SECURITY TECHNOLOGIES LTD.

PowerSeries™ Maximise your sense of security

There was a time when all you needed to feel secure in your home was a burglar alarm. Clearly times have changed and the need for a comprehensive home security system is real.

These two have evolved dramatically over the years, becoming increasingly sophisticated with the arrival of on-line technologies and remote audio and video verification modules. In keeping with new times and technologies, INNOVATIVE™ has redefined the meaning of security, as is evident with the PowerSeries alarm control panels.

PowerSeries security systems allow you to integrate a host of value added and life-safety features and are designed to provide you with peace of mind for years to come.

Motion and Glassbreak Detectors

Motion detectors provide a superior analysis of detected signals through digital processing. Pet owners are protected from false alarms through Vertical Beam Shaping (VBS) a technology that provides pet immunity up to 60lbs

Safe and Secure

For a home security system to be considered comprehensive it needs to protect you whenever you may be inside the home— whether you're cooking in the kitchen or watching television. Helping to keep you and your family safe are Personal Panic Remotes. They provide a portable means to call for help from anywhere in the home and feature one button activation via a large, clearly defined button. To ensure easy emergency access, the personal panic remote includes a multifunction clip that can be mounted in a convenient location or worn on a belt.

To guard against the devastation caused by smoke or fire, homes need to rely on the alertness of smoke detectors. INNOVATIVE™ installs Wireless Photoelectric smoke detectors that use the latest smoke and fire detecting technologies to keep you and your family safe. Because they're wireless, the detectors can be installed in areas of your home that are difficult or impossible to reach with conventional wiring

Multiple Security Systems In One

If you have separate areas in your home that you want to protect—a workshop, rental apartment, or shop front. The Control Panels can be programmed to protect up to eight separate areas (partitions).

If you have a tenant, their security system will work independently of yours, so your keypad won't beep when they enter their apartment.

Wireless Control

Take control of your security system by adding the convenience of wireless protection. With the press of a button you'll be able to remotely control common household tasks such as turning on lights or activating garage doors.

DSC is committed to reducing false alarms, incorporating activation delays into wireless keys that require you to press and hold a button for a period of time before its function is initiated. For example, to trigger the arm/disarm function you must press and hold the appropriate button for one second, and for the panic alert, three seconds.

Easy to Use

A security system is only effective if it's easy to use. PowerSeries offers you simple one-button activation of four and five programmable function keys. So when you're rushing out the door, the push of a single button will ensure that your home is safe. With the special Exit button, there's no need to disarm or rearm the system every time you leave the house or let the dog out. For urgent situations keypad activated emergency keys send an alarm signal to the central monitoring station, which in turn, allows the proper authorities to be summoned (police, fire or emergency services).*
